“Perfecting the rig-less wellbore abandonment method”

PROSERV OFFSHORE ABANDONMENT SERVICES wants to be your wellbore abandonment operations provider. With over 20 years experience in conducting wellbore abandonments, on over 500 wells world wide, we have the depth of knowledge to ensure your operation is conducted in the safest, most efficient, and most cost effective manner possible. We are sure the professionalism of our operations group and the experience of our engineering staff will be a welcome and valued part of your abandonment team.

Starting in the early '80's, the staff at Proserv Offshore has strived to become the preeminent supplier of rig-less wellbore abandonment services. Not the biggest; not the cheapest. Our goal has been to provide our extensive client base with a sound operation, the most qualified personnel, dependable well maintained equipment and a proven track record of meeting abandonment regulatory standards and exceeding the client's expectations. The history of Proserv Offshore's repeat clients attests to our ability to achieve this goal.

The Proserv Offshore operations group averages over 15 years experience in wellbore abandonment. With 100's of

PROSERV OFFSHORE ABANDONMENT SERVICES

abandonments under their belt these teams are an essential component of Proserv Offshore's success. Our clients expect our teams to conduct their operations in the safest manner, following the approved procedures, and meeting or beating the time line. Our clients keep coming back because we do just that.

Our engineering group is a multifunctional team consisting of engineers with varying backgrounds and experience. This team of professionals will oversee your abandonment operations and coordinate the project from beginning to end. The depth of this team's experience is available throughout the operation to handle any technical or logistical situation that may arise. Our clients consider this facet of Proserv Offshore to be a value that transcends typical wellbore abandonment costs.

The Proserv Offshore team has experience in a multitude of abandonment scenarios. Specialising in the rig-less abandonment operations, Proserv Offshore is able to provide planning and execution of projects including any one of the following scenarios;

- **Multi-well platforms**
- **Single well caissons**
- **Inland water wells**
- **Subsea wells**
- **Storm damaged well sites and structures**
- **Slot recovery**
- **Preparation for side track**

The Proserv Offshore team can supply all or part of the following services to meet your needs;

- Gather all available well information – our engineers will dig through the files and accumulate whatever data exists to ensure an accurate picture of the existing wellbore status.
- Develop current and proposed wellbore schematics – with the above information our engineers will develop the current and proposed wellbore schematics for review and compliance with all regulatory standards.

- Write abandonment procedures – Our engineers will write the abandonment procedures ensuring compliance and utilising the safest and most efficient methods.
- Mobilise team – we are uniquely capable of handling all aspects of project mobilisation. From securing marine needs to salvaging the structure, the Proserv Offshore team can help.
- Conduct operations – the Proserv Offshore engineering team is available to either manage just the well abandonment operation, or oversee the entire operation giving our clients a single point of responsibility and communication.
- Demobilise job – from providing post job reports on well abandonment to finishing a rigs-to-reef operation, we are available to assist.

As you establish your abandonment needs consider what you value in a service provider.

- **Quality**
- **Experience**
- **Dependability**
- **Efficiency**
- **Safety**
- **Professionalism**

If you place as much value on these aspects of your operation as we do, contact us now.

Over 20 years experience and 500 wellbore abandonments to our name!
