“Performance leading pumping solutions for any industrial situation.”

WITH OVER 30 YEARS experience in this industry, Proserv Offshore offer performance leading high & ultra high pressure water jetting units and accessories, customised to suit any industrial situation. These are all designed for hazardous zoned and unzoned areas and operate in the most demanding environments. In particular, these are used for marine growth removal and protective coating removal on steel structures, chains, conductors and pipelines for inspections, maintenance and testing purposes.

Proserv Offshore hire and supply high-pressure and ultra-high-pressure pumping equipment to organisations throughout the world in a wide range of industries, applications and operating conditions. Designed and made to the highest specifications, Proserv Offshore has a wide range of pump units, specialist accessories and high and ultra high pressure cutting equipment. Additionally, Proserv's fleet consists of a full range of both onshore trailer mounted and offshore containerised zone 1 and 2 units.

PROSERV OFFSHORE

HIGH & ULTRA HIGH PRESSURE PUMPS & ACCESSORIES

Choosing the right pump unit to suit your needs requires careful consideration, as every industrial situation will need a slightly different solution. We believe however, that from our experience we can tailor a solution that will perfectly match your requirements. Our equipment range now includes pressures of up to 44,000 psi and flow rates of 200 litres per minute, with diesel and electric driven options.

Specialist Surface Preparation

We also provide surface preparation to a SA 2.5 finish for inspection and maintenance. All of our systems have a vacuum recovery function and as such have the added benefit of being environmentally friendly.

The SpiderJet is specifically used for stripping vertical, inclined and horizontal surfaces using ultra high pressure water up to 3000 bar. The unit is attached to the surface by vacuum force and driven by pneumatic motors. This system is particularly efficient and highly manoeuvrable due to its rotating rim and twin wheel drive.

The hyper-blast in comparison is ideal for removing paint, rust, anti-slip and deck coatings and as such is generally used in a horizontal function. The unit is mounted on a four wheel carriage for easy manoeuvrability and is fully adjustable.

Accessories

Proserv Offshore offer a wide range of accessories from our hire fleet such as:

- **Jetting suits for UHP use**
- **Spinning Nozzles**
- **Jetting nozzles**
- **Hoses**
- **Rigid lances**
- **Foot valves**
- **Waterblast tools**
- **Guns – underwater/topside**
- **Custom built cleaning tools**
- **Semi automatic surface preparation tools**
- **UHP cutting manipulators and nozzles**
- **Pile cleaning and cutting systems**
